# Objectives

- ❑ Moving on from the simple view
  - Adapting to achieve your goals
  - Avoiding pitfalls
  
- ❑ Confident RM application
  - Hypothetical risk assessment
  - Sharing experiences and insight

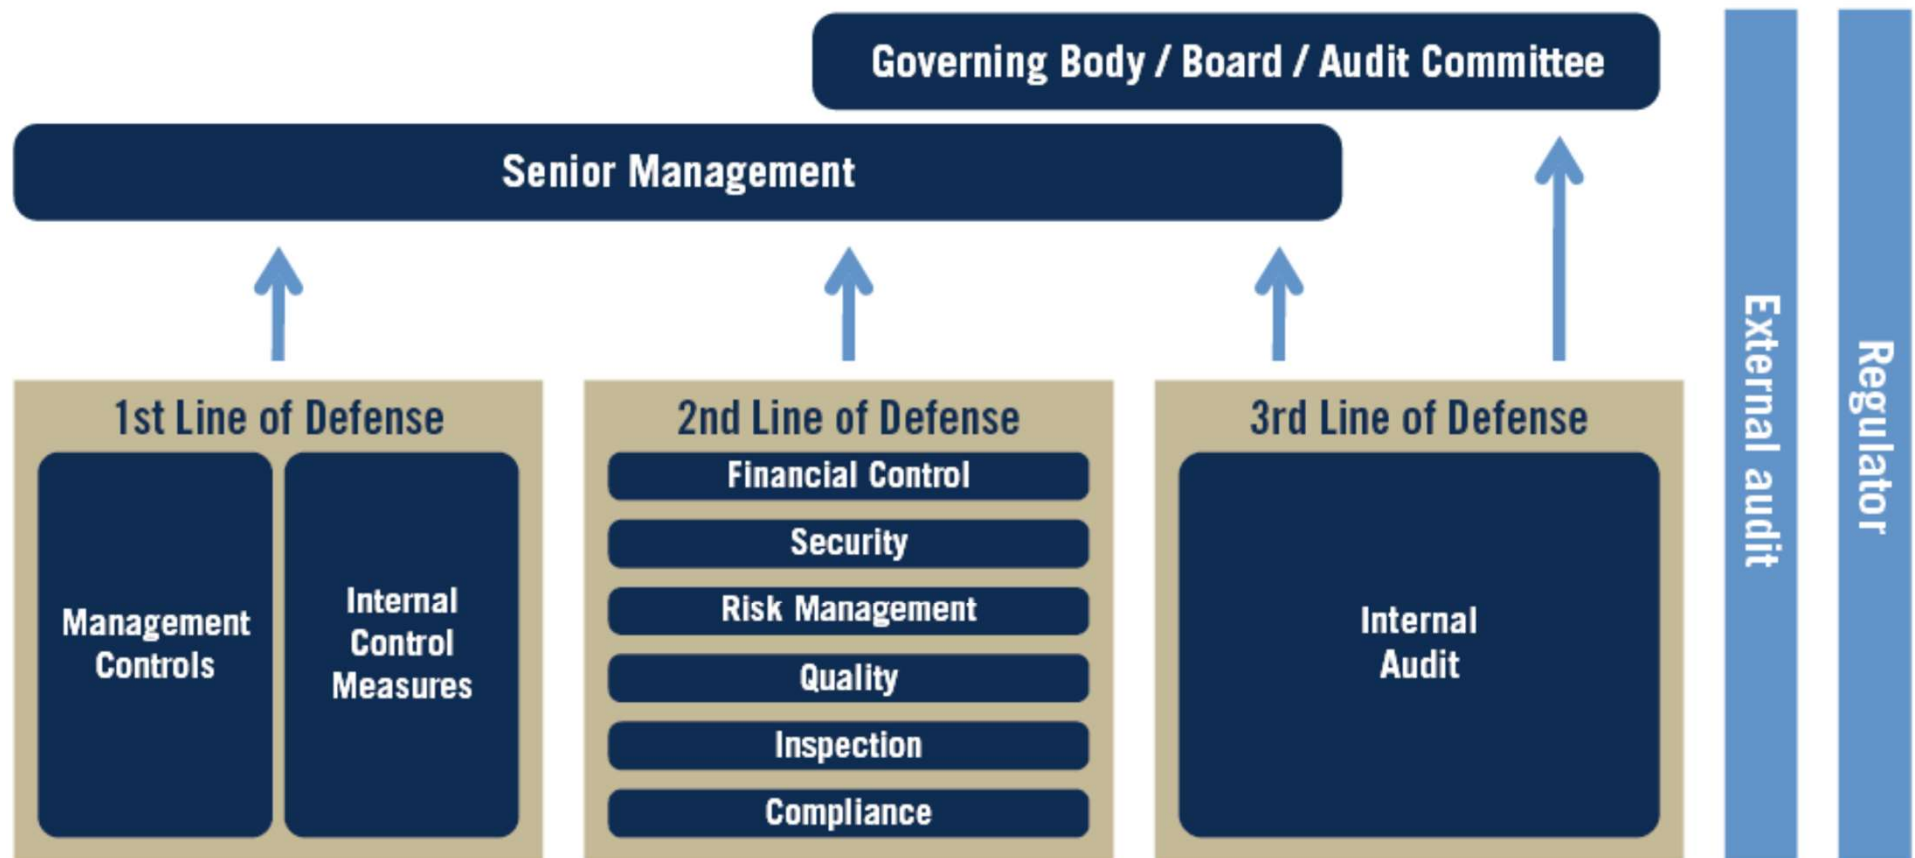

# Agenda

- ❑ Your experiences
  - What worked
  - What didn't
- ❑ Deep dive – Risk assessments
- ❑ Traps for young players
- ❑ Practice Run

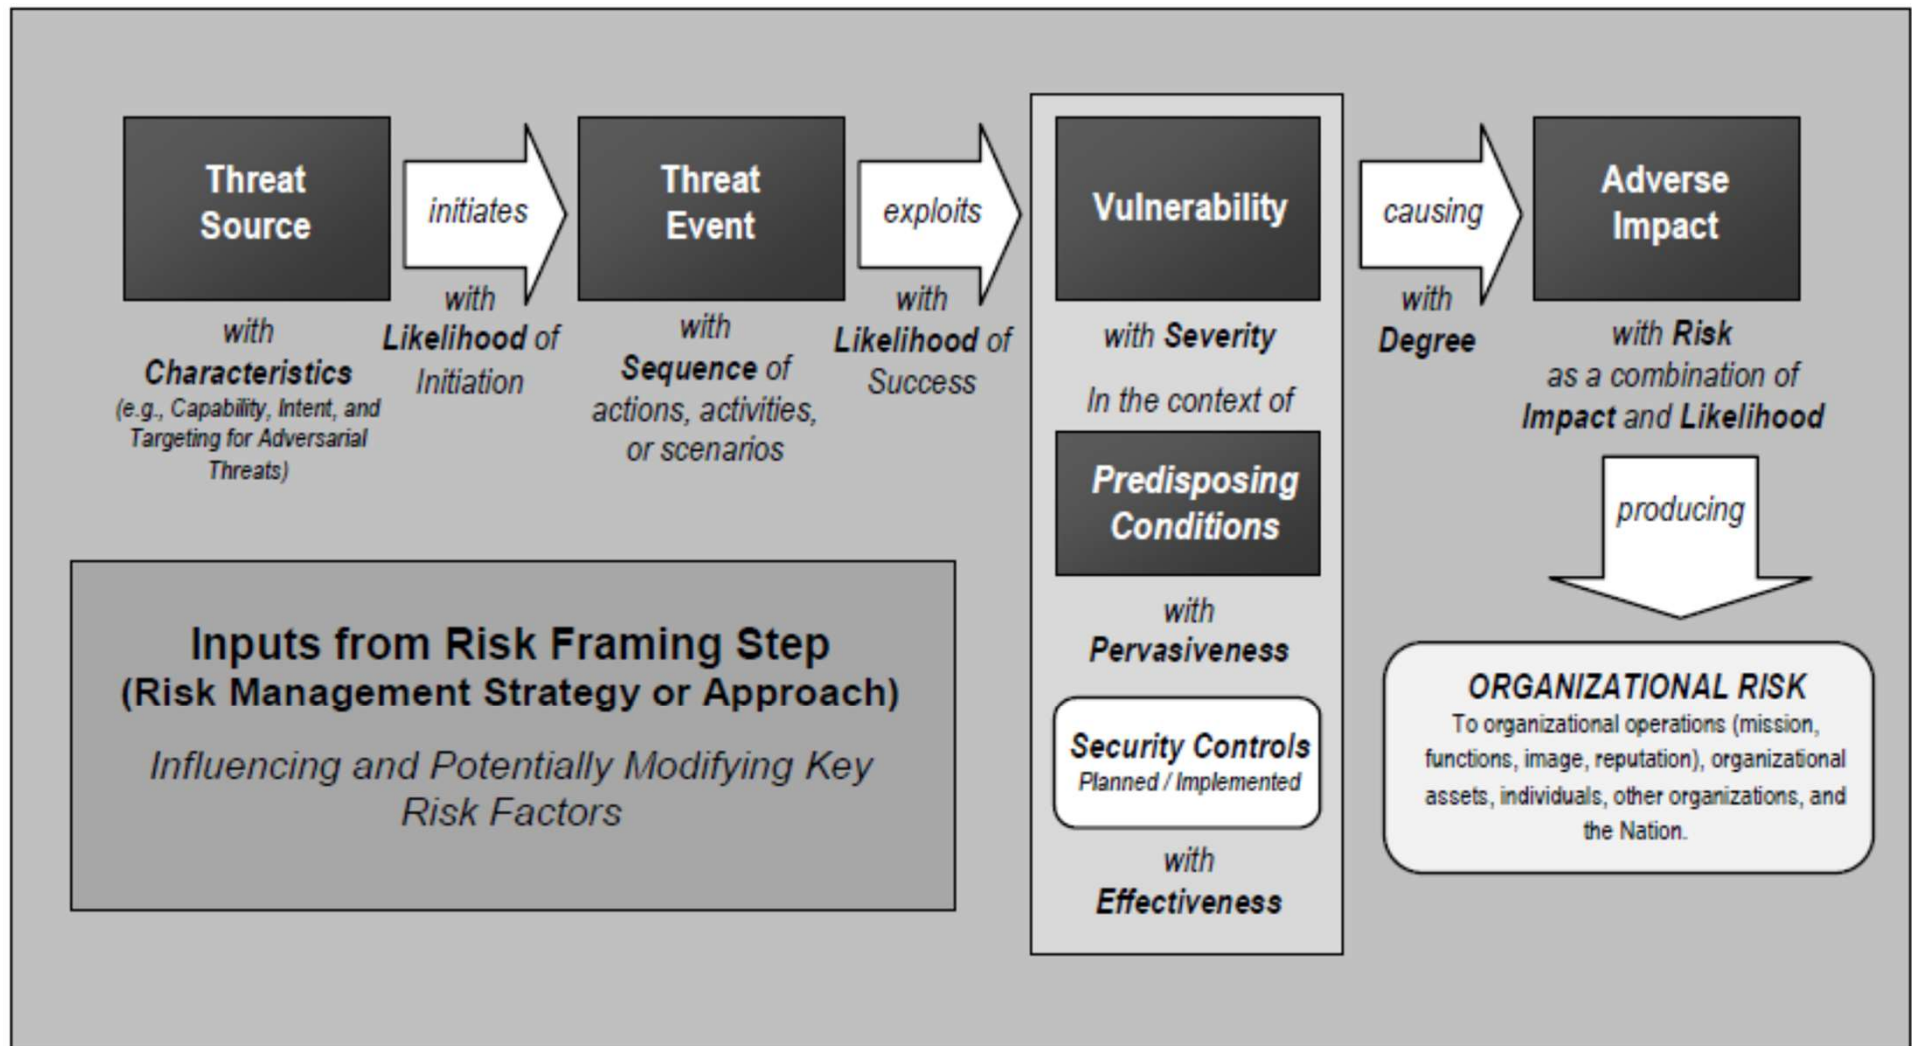

# Institute of Internal Auditors

## The Three Lines of Defense Model

Adapted from ECIIA/FERMA *Guidance on the 8th EU Company Law Directive, article 41*

# NIST SP800-30 (USA)

# NIST SP800-30 (USA)

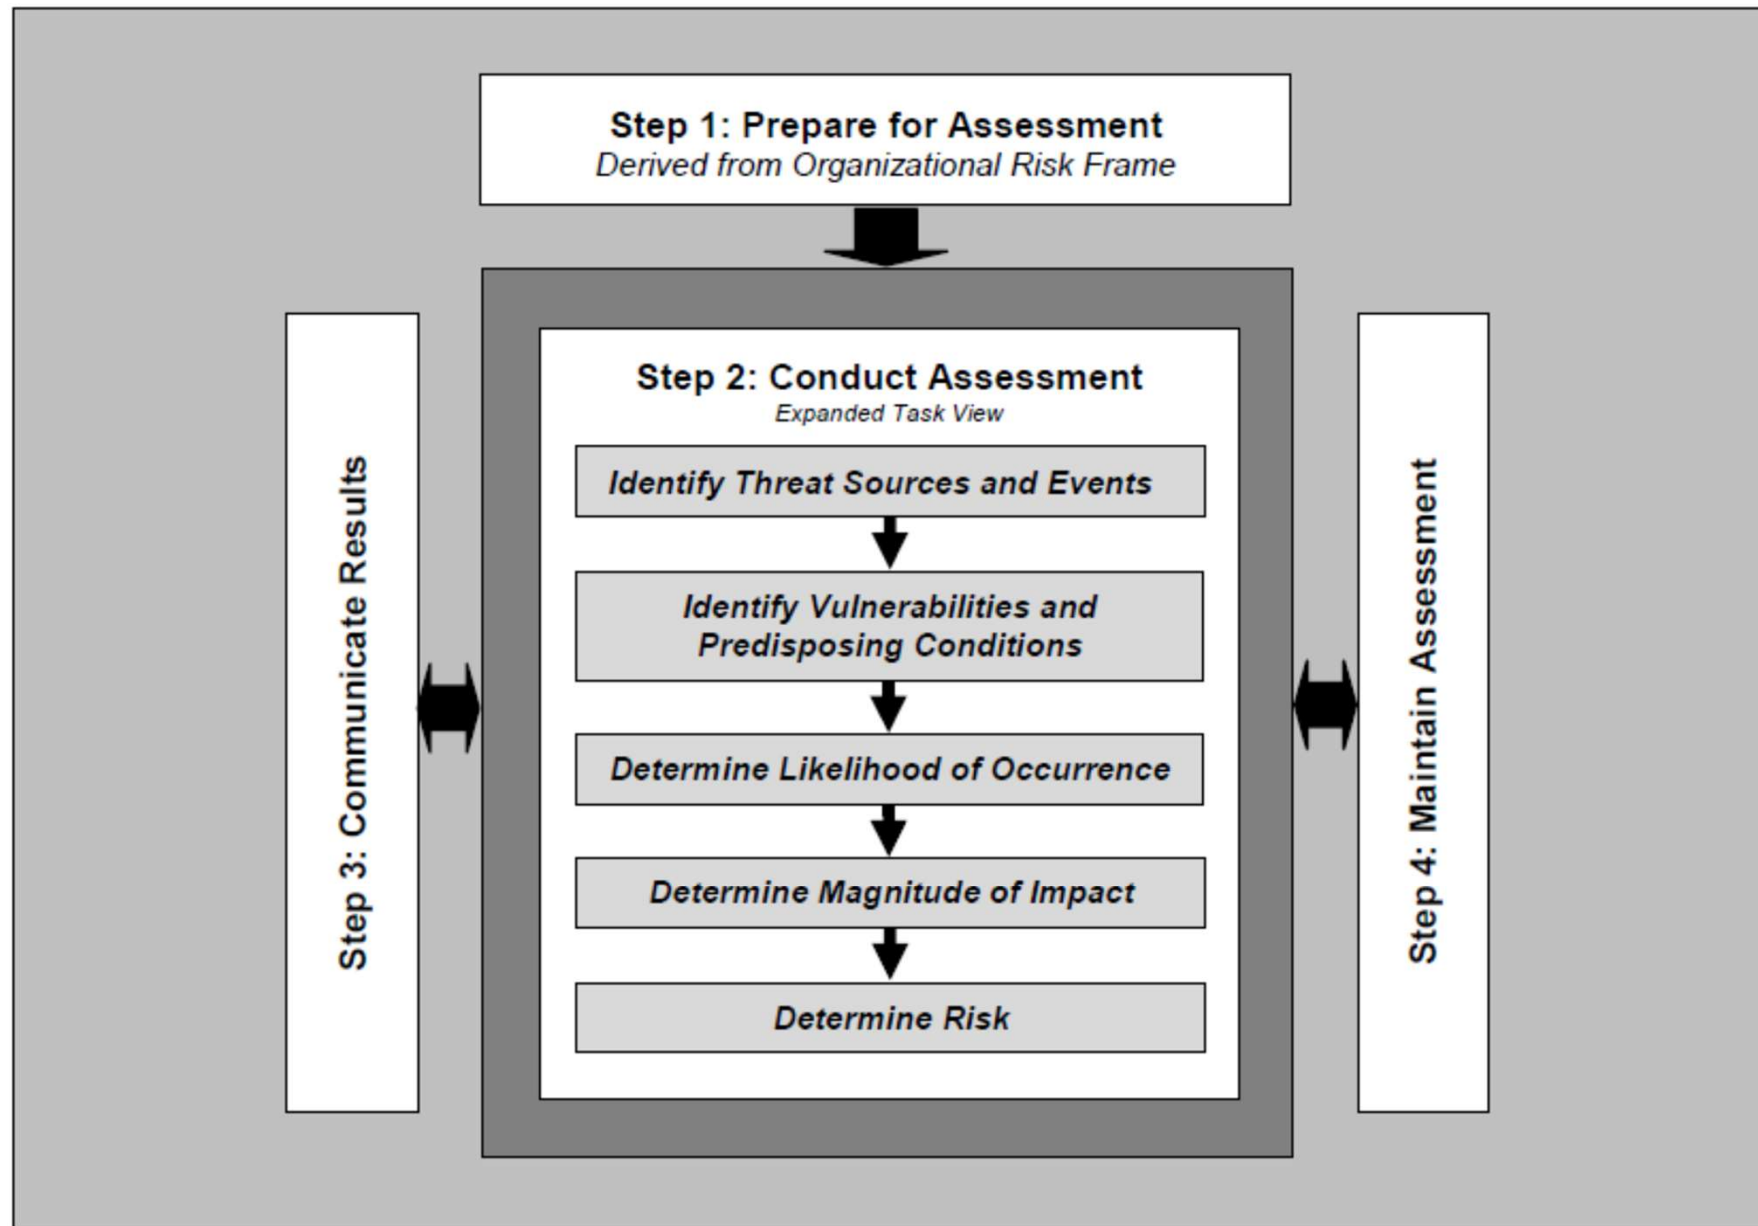

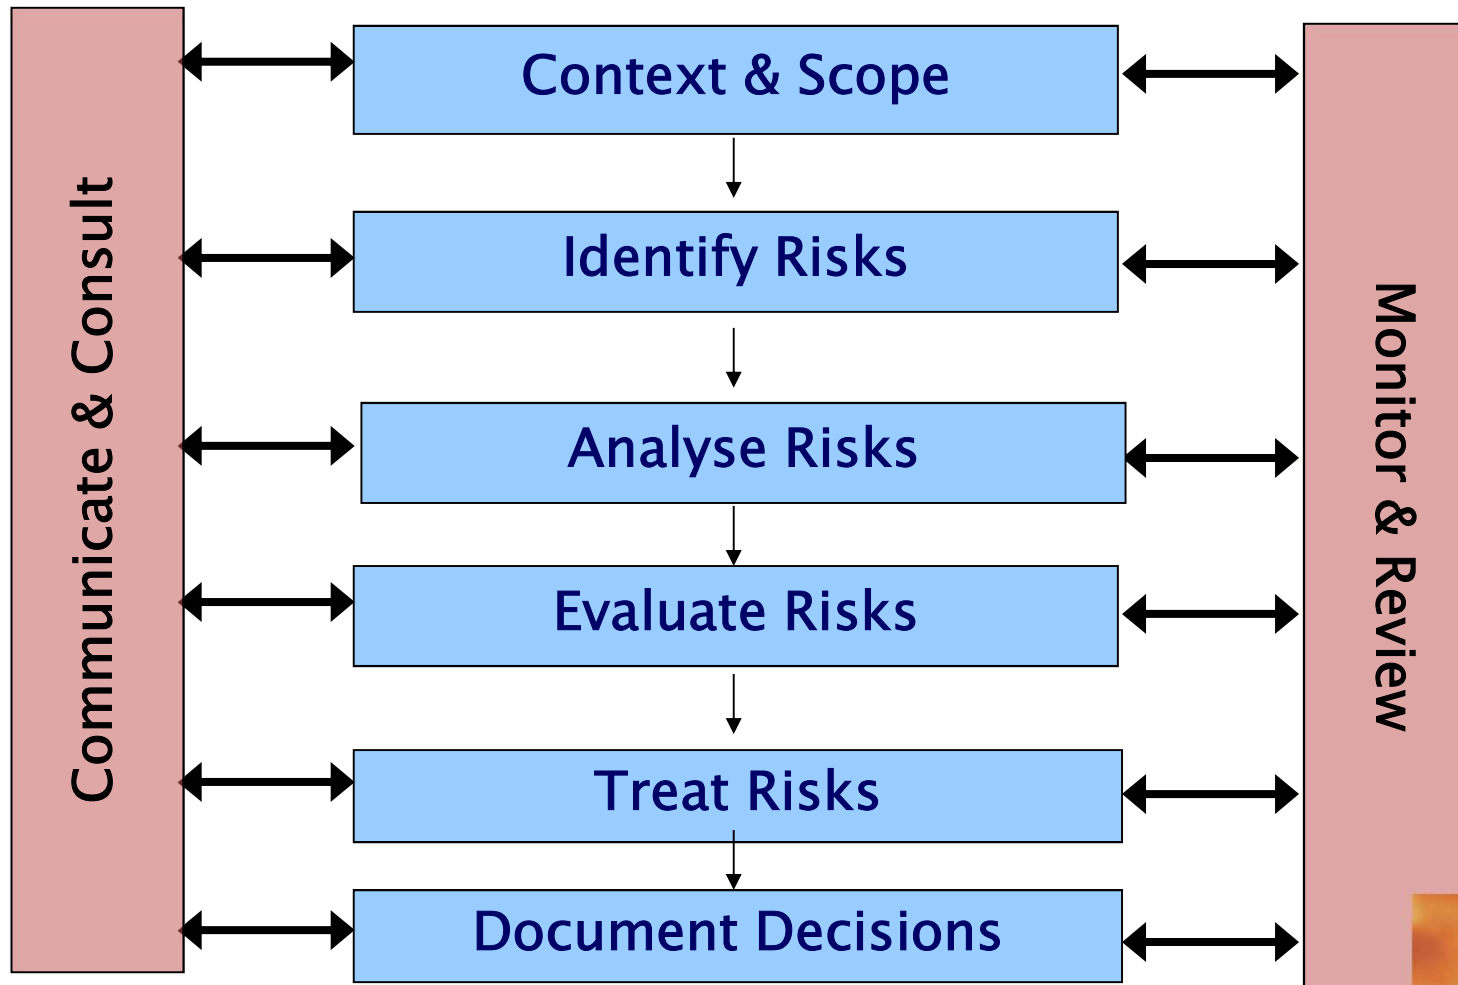

FIGURE 5: RISK ASSESSMENT PROCESS

# Risk Management Process

# WHAT WORKED

# Hmmm

<b>Sony</b>	\$2 billion
<b>Heartland payments</b>	Business failure
<b>Digi notar</b>	Business failure
<b>RSA</b>	Significant loss of good will and place on the pedestal \$\$ for replacement of tokens \$\$ liability for consequential breakins
<b>Payrolls – QH</b>	\$\$, Loss of confidence in a Government
<b>PCEHR</b>	4 months delay in detection penetration
<b>US Govt leakage to wikileaks</b>	TBA
<b>US nuclear superiority</b>	TBA
<b>Banks – incorrect interest calculations</b>	Inversely proportional cost of rectification

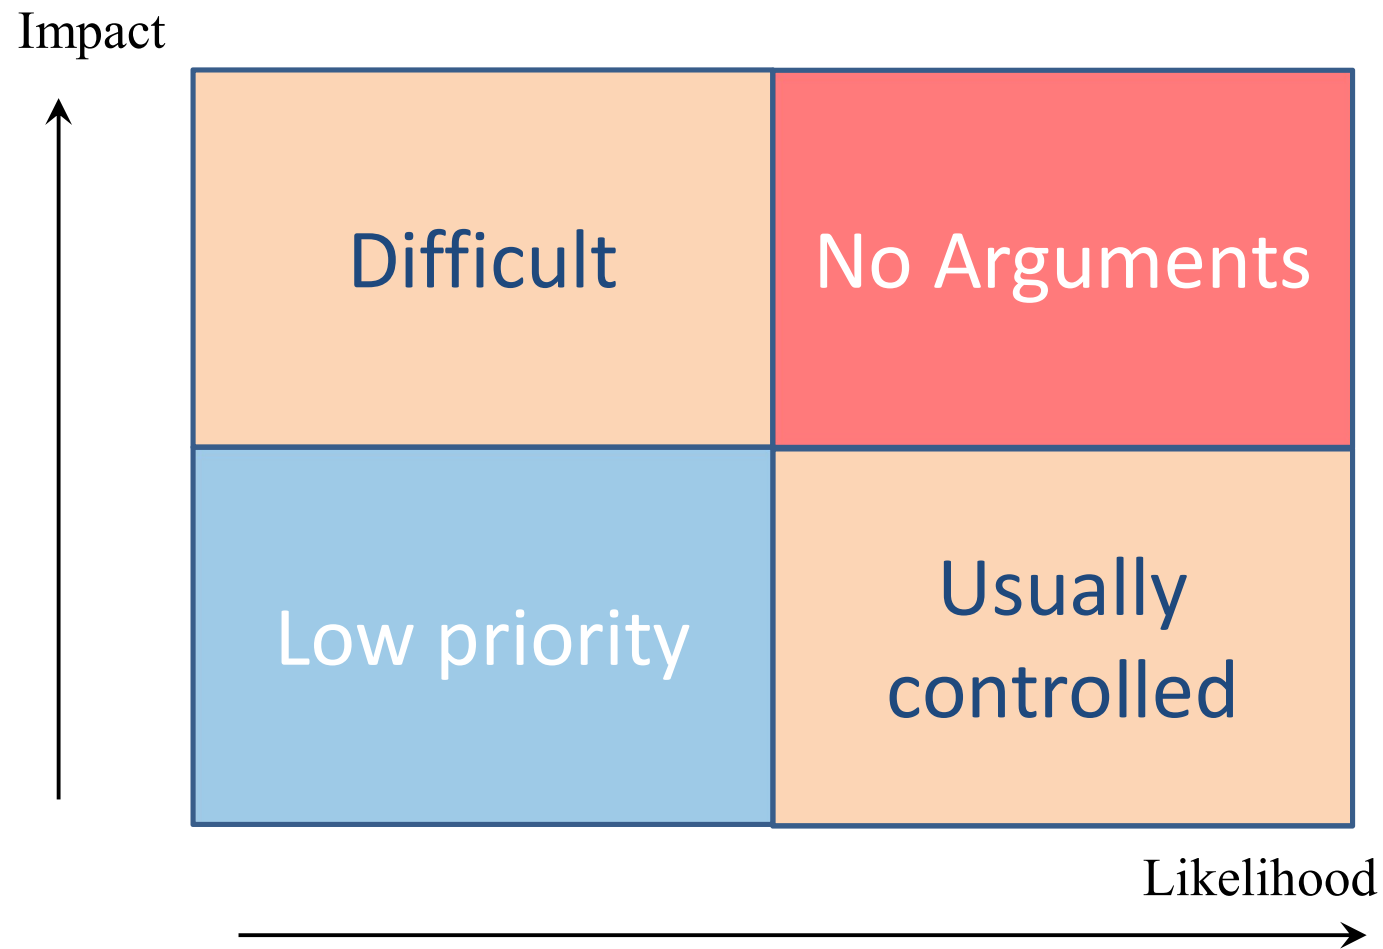

# Hmmm

<b>Sony</b>	<b>\$2 billion</b>
<b>Heartland payments</b>	Business failure
<b>Digi notar</b>	Business failure
<b>RSA</b>	Significant loss of good will and place on the pedestal  \$\$ for replacement of tokens  \$\$ liability for consequential breakins
<b>Payrolls – QH</b>	\$\$, Loss of confidence in a Government
<b>PCEHR</b>	4 months delay in detection penetration
<b>US Govt leakage to wikileaks</b>	TBA
<b>US nuclear superiority</b>	TBA
<b>Banks – incorrect interest calculations</b>	Inversely proportional cost of rectification
<b>Yahoo</b>	3 billion accounts  \$350 million price drop for Verizon acquisition (ouch!)

# Support for Security

# Traps & Pitfalls

# Don't Expect Perfection

- ❑ Not all threats may be identified before hand
  - Remember September 11
- ❑ Likelihood is an educated guess
  - Imperfect information
  - Predicting the future
  - Betting with the odds
- ❑ Vulnerability is variable
  - Human perception
  - Changing circumstances
- ❑ Consequences are often hypothetical
  - What if?
  - Worst case or likely case impacts?

# Traps for New Players

- ❑ Ideology
- ❑ Ignorance
- ❑ Politics
- ❑ Security is only confidentiality
- ❑ Auditing detailed controls
- ❑ All risks are high
- ❑ Quantitative
- ❑ Too much detail

# Security is not just Secrets

- ❑ Security is:
  - Confidentiality
  - Integrity
  - Availability

# Auditing

- ❑ It is not necessary to audit controls to prepare a risk assessment
- ❑ Detailed risk assessments analyse control effectiveness
  - High level risk assessments focus on major control gaps

# Details, details, . . .

- ❑ Don't get too detailed
  - “breadth first” rather than “depth first”
  - Group similar assets
  
- ❑ Quantitative assessments
  - Many information security issues don't suit an analysis based on \$\$
  - Aim for qualitative assessments

# Getting Management's Attention

- ☐ Loud
- ☐ Logic
- ☐ Power structure
- ☐ Regulator
- ☐ Credibility

# Practical Realities

# An Imperfect Process

- ❑ Not all threats may be identified
  - Remember September 11
- ❑ Likelihood is an educated guess
  - Imperfect information
  - Predicting the future
  - Betting with the odds
- ❑ Vulnerability is variable
  - Human perception
  - Changing circumstances
- ❑ Consequences are often hypothetical
  - What if?

# Managing Risk

- ❑ Not all risks can be eliminated
  - Doing business is taking a risk!
- ❑ Not all risks can be anticipated
  - SARS, September 11
- ❑ Management makes investment decisions
  - Cost of controls vs cost of potential consequences
- ❑ Risk analysis is only the beginning
- ❑ An ongoing program is essential

# Fact: Commitment Varies

- ❑ Management perception of threats
  - Ignorance is bliss?
  - Credibility of the risk management process
  - Priorities from Board or Cabinet
- ❑ Risk appetite
  - Willingness to accept potential losses and disruptions
- ❑ Context of existing “culture”
  - Not invented here
  - Head in the sand
  - Full speed ahead
  - CYA

# Constraints

- ❑ Skilled resources
  - Training and experience
- ❑ Funding
  - Budget and finance processes may be inadequate
- ❑ Internal competition for priority
  - My risk is bigger than yours
- ❑ Impact on operational staff
  - Additional human resources may be required
  - Or fear of this
- ❑ Effort
  - RM effort must be balanced against other activities

# Time and Money

## ❑ Lead times for risk treatment

- The longer you wait, the more it costs
- Today's major risk could be irrelevant next year
- New and urgent critical risks can intervene
- The worst could happen *before* you're prepared

## ❑ Costs

- Design and development
- Implementation
- Management and maintenance
- Operational overheads
- Impact on system reliability or availability

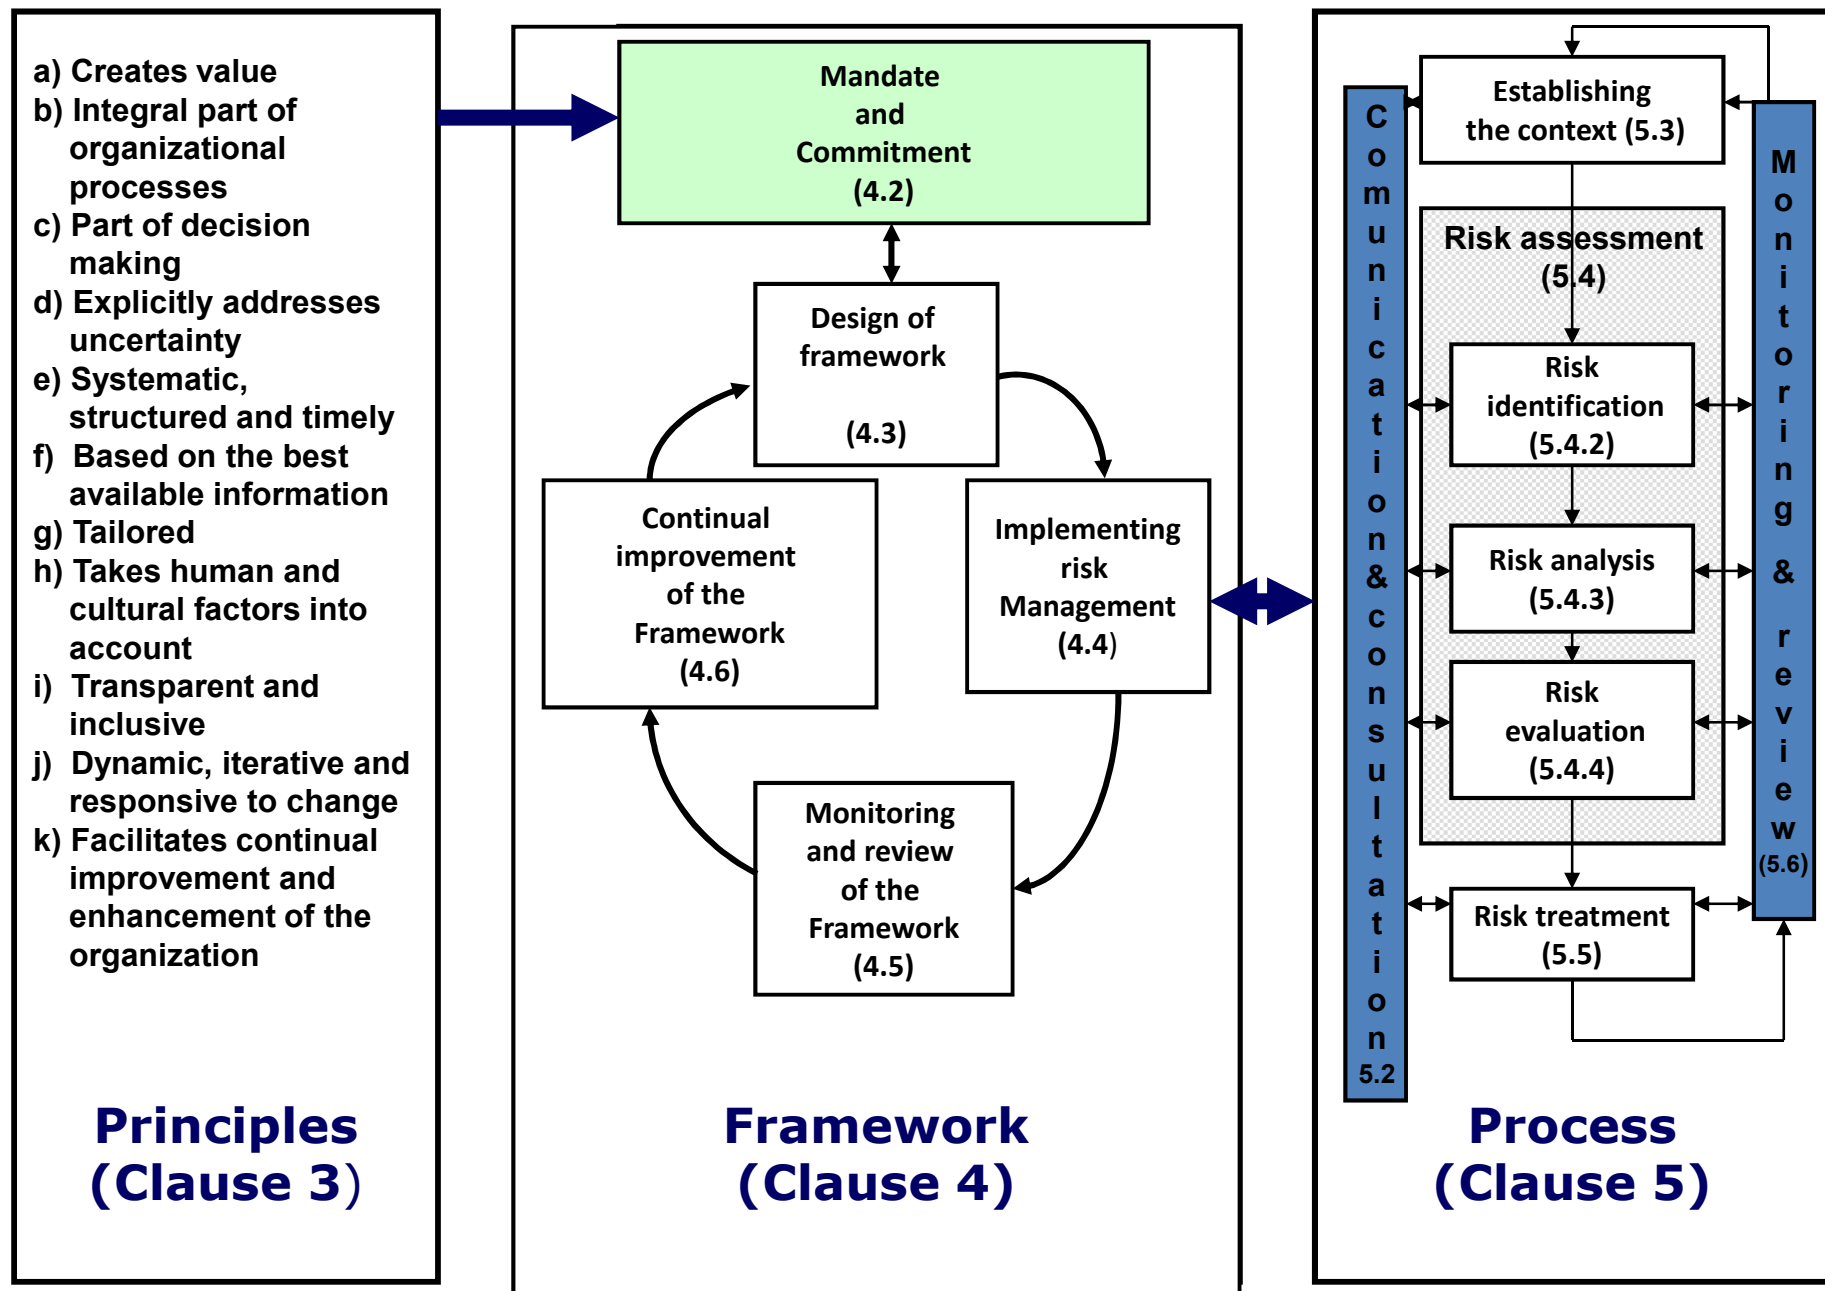

# Details, Details . . . .

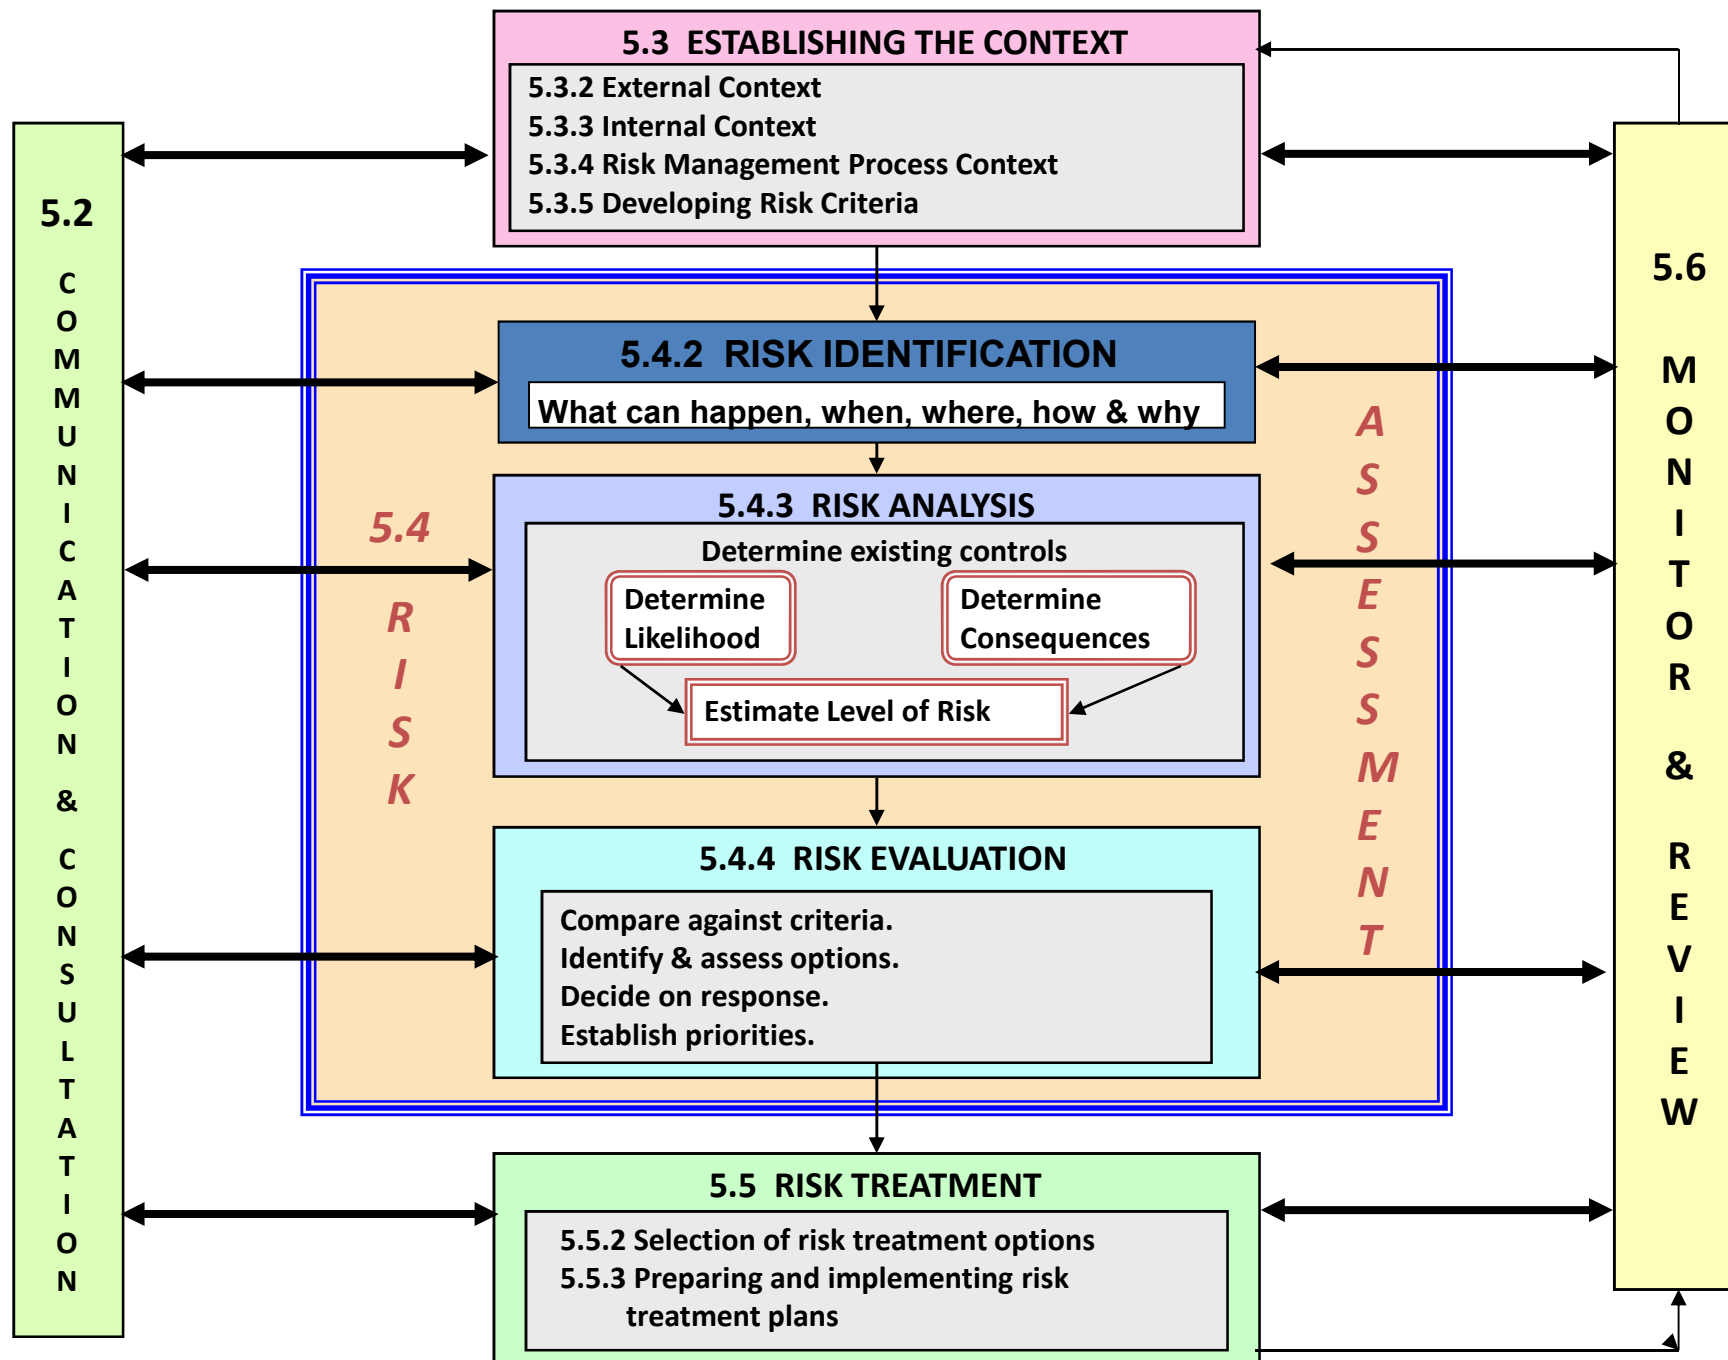

- ❑ Don't get too detailed
  - “breadth first” rather than “depth first”
  - Grouping or abstraction strategy
    - similar assets
    - similar vulnerabilities, similar threats
- ❑ Quantitative assessments
  - Many information security issues don't suit an analysis based on \$\$
  - Aim for qualitative assessments

# **RISK THEORY REVISITED**

# **CONTEXT – DETAILED DISCUSSION**

# Context

## ❖ Strategic Context

- Objectives
  - Organisational
  - Key players
- Operational Environment
- Strengths & Weaknesses

## ❖ Organisational Context

- Policy
- Governance structure
- Management structure
- Capabilities
- Culture

## • Risk Management Context

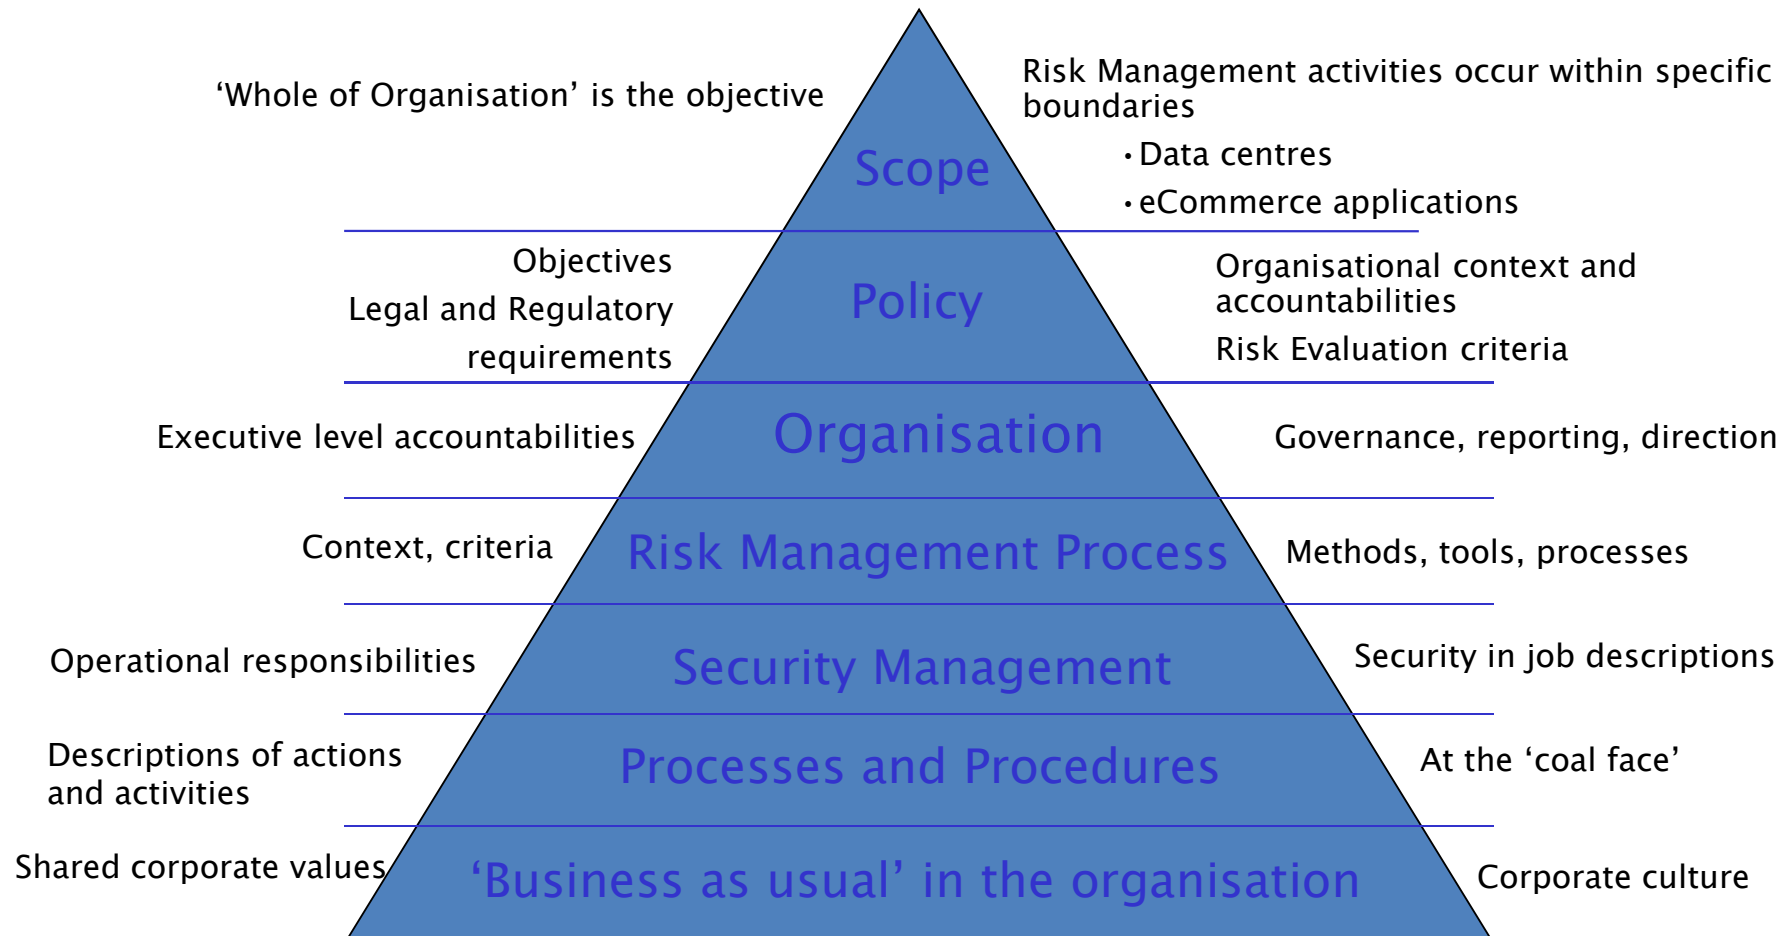

- Attitudes towards Risk
- Skills and experience

## • Evaluation Criteria

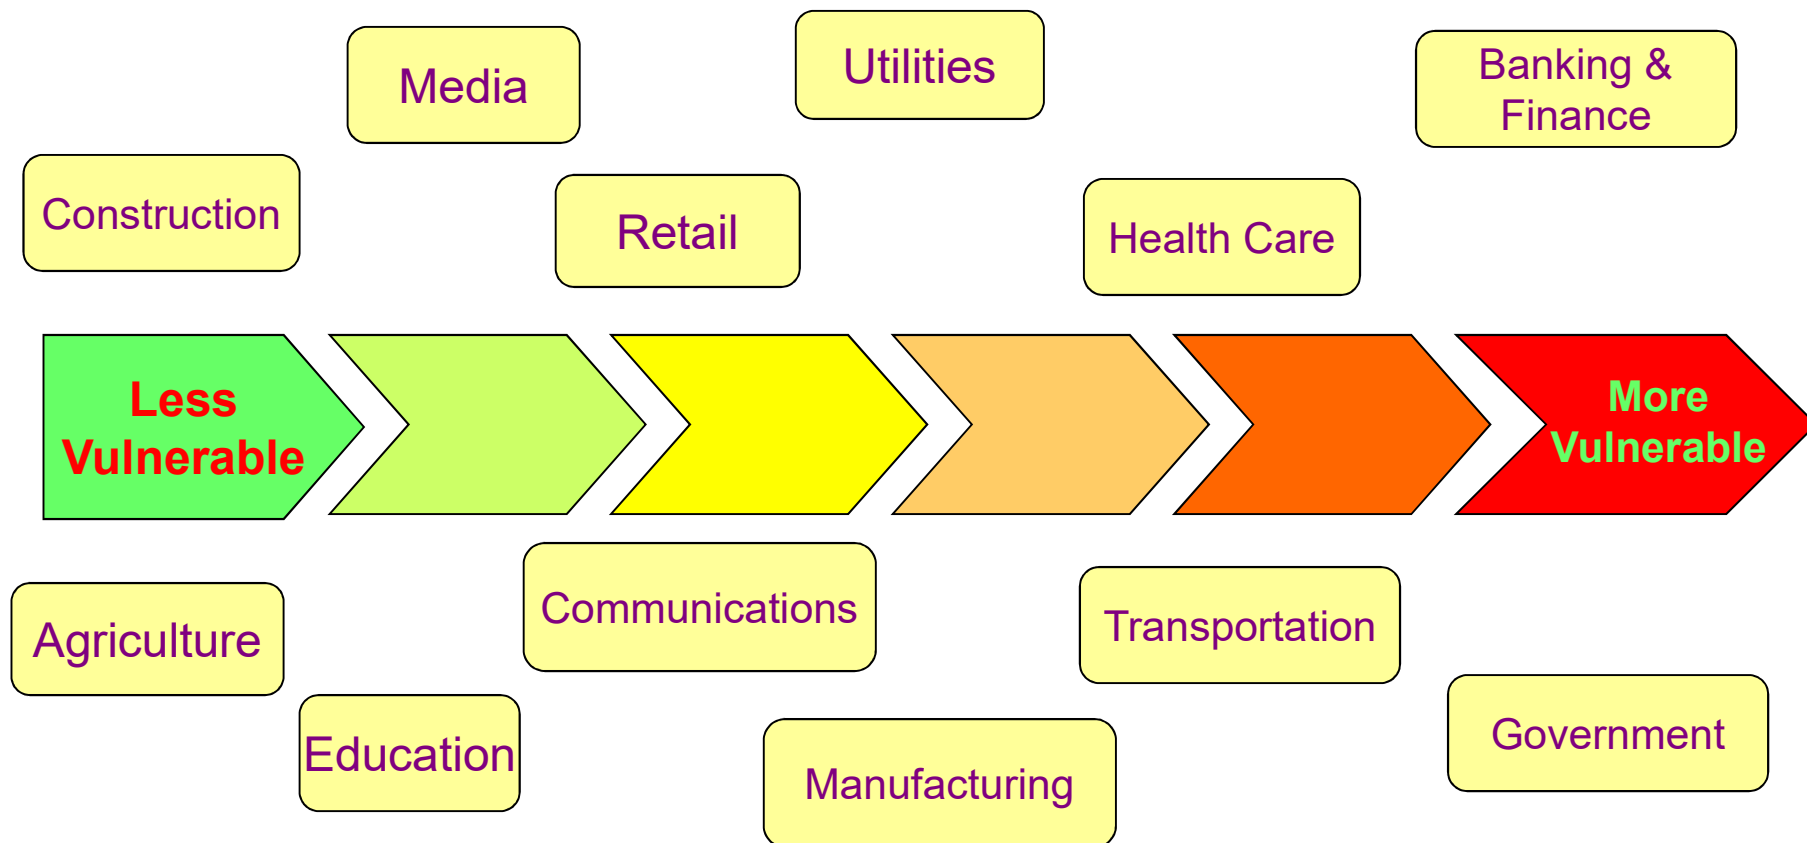

- How is organisational performance measured?
- How will risk be measured?
- Is accountability welcomed?

# The Risk Management Context

# Risk in the Organisational Context

Source IDC 2000

# Identify the assets in scope

- ❑ Business Processes
- ❑ Critical data and information
- ❑ Technical Infrastructure
- ❑ Physical infrastructure
- ❑ Business units
- ❑ Legal drivers

# Scope of Risk Assessments

- ❑ Organisation wide
  - systems and operational processes
- ❑ Specific information systems
- ❑ Projects
- ❑ Technical analysis of software and configurations
- ❑ Operations, Infrastructure

# Major Areas of Risk

- ❑ Human factors
  - Errors, fraud, unauthorised activity.
- ❑ Information & Privacy
  - Appropriate management of sensitive and personal Information
- ❑ Disruptive software (Malware)
  - Viruses, worms, programming errors
- ❑ Technical Configuration & Change Management
  - Hackers, operational errors, inappropriate access
- ❑ Physical and Environmental
  - Theft, disruption, flood, fire

# Accurate Analysis

## ❑ Correct Context

- Audiences
  - Decisions & funding
  - Implementation of Recommendations
- Crucial for the communication
- Setting the criteria for acceptance, treatment . .
- Know who and why you're doing the risk assessment
- Know the management's drivers

# **RISK IDENTIFICATION**

# Agree on the Threats

- ❑ A major source of disengagement
- ❑ Tools
  - Case studies
  - Regulations, industry experience
  - Threat assessment process (formal)
    - Standards Australia Handbook 167
      - Security Risk Assessment
        - » (this is a physical security document)

# Scope of Threats

- ❑ errors and omissions
- ❑ fraud and theft
- ❑ employee sabotage
- ❑ loss of physical and infrastructure support
- ❑ malicious hacking
- ❑ malicious code
- ❑ industrial espionage

Australian Government TISN – Defence in Depth

# Threat Assessment

Source	Motivation	Intent	Capability	Threat Level	Evaluation & Comments

# Workshops

List risks:

Brainstorming, Structured discussion

# **RISK ANALYSIS**

# Analysing Risk

- ❑ Identify known and perceived Threats
- ❑ Consider the Likelihood
- ❑ Evaluate the Impact
  - Consider your *existing* security regime
- ❑ Determine Level of Risk

# Risk Likelihood

## Vulnerability Level

Threat  
Level

	Low	Medium	High
High	Moderate	Likely	Almost Certain
Medium	Unlikely	Moderate	Likely
Low	Rare	Unlikely	Moderate

# Analysis – Key Aspects

Aligned to ‘Enterprise risk’

# Analyse Consequences

Consequence	Financial	WHS	Legal	Reputation	Environment
Catastrophic	Profit x 10	Multiple	Loss of licence	Long term negative brand	Long term severe damage
Severe	Profit x 1	Death, severe injury	Restricted licence,	Media campaign	Short term severe damage
Major	10% of profit	Serious injury	Fines, damages	Adverse media	Major damage
Minor	1% profit	Minor injury	Technicality	Minor exposure	Repairable
Insignificant	> \$ 5000	Loss of time	Mediation	Limited awareness	Negligible

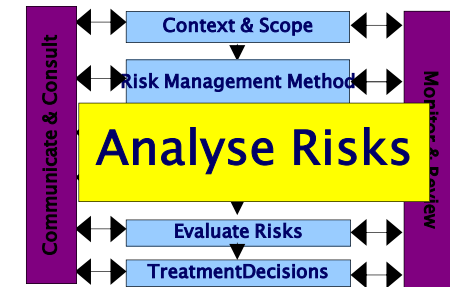

# Risk Analysis

Risk Evaluation - **Level of Risk**

**Level of Risk**

**Impact**

**Likelihood**

	Insignificant	Minor	Moderate	Major
High	M	H	E	E
Medium	M	M	H	E
Low	L	M	M	H
Unlikely	L	L	M	M

Legend

**E: extreme risk**; immediate action required

**H: high risk**; senior management attention needed

**M: moderate risk**; management responsibility must be specified

**L: low risk**; manage by routine procedures

**Customise  
for your  
Organisation**

# RM Process – Analysis Pitfalls

## ❑ Traps :

- Wrong audience
- Inaccurate consequence
- Ignoring compensating controls

# Compensating Factors

❖ Search for other controls that limit the risk

- Business process level
- Financial separation of duties
- Detective controls, eg.

# Set Priorities

## Risk register

Risk Description	Risk Assessment		Existing controls	Impact Rating	Likelihood Rating	Level of Risk	Risk priority
	Threat	Probability					
<b>Router Compromise</b>	Intrusion, Disruption	Many times per year	Password Only	<b>MODERATE</b>	<b>HIGH</b>	<b>HIGH</b>	<b>?</b>
<b>Physical Destruction of Data Centre</b>	Operations Disrupted for one month	Once in 25 Years	None (Not addressed in BCP)	<b>MAJOR</b>	<b>LOW</b>	<b>HIGH</b>	<b>?</b>

# NIST SP800-30 (USA)

TABLE I-5: TEMPLATE – ADVERSARIAL RISK

1	2	3	4	5	6	7	8	9	10	11	12	13
Threat Event	Threat Sources	Threat Source Characteristics			Relevance	Likelihood of Attack Initiation	Vulnerabilities and Predisposing Conditions	Severity and Pervasiveness	Likelihood Initiated Attack Succeeds	Overall Likelihood	Level of Impact	Risk
		Capability	Intent	Targeting								

# Risk Treatment

- ❑ Avoid the risk
  - Just DON'T do it
- ❑ Transfer or share the risk
  - Shift liability by contract
- ❑ Apply Controls
  - Processes and Technology
- ❑ Insurance

# Examples of Controls

## ❑ Integrity

- Design Controls (Validation, etc)
- Access controls
- Logging
- Change Management Processes

## ❑ Confidentiality

- Authentication
- Encryption
- Non-disclosure agreement

## ❑ Availability

- Capacity and resource planning
- Business Continuity Plan
- Architecture and Design (redundancy)

# TECHNIQUES - EVALUATION

# Decisions Decisions . . .

image courtesy of [www.novodiem-bv.com](http://www.novodiem-bv.com)

# Control Cost/Benefit Analysis

- It usually comes down to \$\$

# Document Decisions

## Risk register

Risk Description	Risk Assessment		Existing controls	Impact Rating	Likelihood Rating	Level of Risk	Risk priority	Treatment Plan
	Threat	Probability						
<b>Router Compromise</b>	Intrusion, Disruption	Many times per year	Password Only	<b>MODERATE</b>	<b>HIGH</b>	<b>HIGH</b>	<b>2</b>	Project Y03
<b>Physical Destruction of Data Centre</b>	Operations Disrupted for one month	Once in 25 Years	None (Not addressed in BCP)	<b>MAJOR</b>	<b>LOW</b>	<b>HIGH</b>	<b>1</b>	Project Z21

# Effective Risk Management Framework

- ❑ Align

- policies and operational objectives

- ❑ Integrate

- management processes

- ❑ Communicate

throughout the organisation

management program

Information risk management process

**Priority – Effective Communication!!**

# **TECHNIQUES – PROGRESS REPORTS**

# Scorecards & Self Assessment

- ❑ Effective shortcuts and metrics
- ❑ Customised to organisation
- ❑ Integrated with performance reporting and project methodologies

# Risk Self Assessment

- ❑ Simple questionnaires and checklists
- ❑ Tailored to organisation
  - Policy
  - Risk methodology
  - Risk profile
- ❑ Can be integrated with other monitoring and compliance tools

Business IMPACT

Information IMPACT

Accountability CONTROL

MITIGATION Controls and Processes

Risk LIKELIHOOD

System VULNERABILITY

RISK TREATMENT

Name of System or Application \_\_\_\_\_ Product Catalog \_\_\_\_\_

Question	Answer	Score
What is the business criticality of the system?	<input type="checkbox"/> Non-Critical <input checked="" type="checkbox"/> Operational <input type="checkbox"/> Mission Critical	1
What is the highest classification of information stored or processed by the system?	<input type="checkbox"/> Public <input type="checkbox"/> Internal <input checked="" type="checkbox"/> Commercial in Confidence <input type="checkbox"/> Confidential	2
Has a business owner been assigned?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Is a formal process in place to grant access to the system for all users?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Have there been any significant system events affecting business functions or revenue in the past year?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Do customers or business partners directly access this system?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	

0-3 Low Risk      No further action required

4-6 Medium Risk      Business owner to manage

7-9 High Risk      Report to Risk Group

# Balanced Scorecards

- ❑ Defines objectives and metrics
  - Linked to corporate governance/strategy
- ❑ Sets targets and initiatives
  - Linked to performance management
- ❑ Provides regular reports
  - Assessment and comparison
- ❑ Established corporate management and performance monitoring tool

# Balanced Scorecards Projects

## ❑ Objective

- Identify and manage IT security risks for new projects

## ❑ Measures

- Completed self assessments
- Completed security plans
- Security plans on schedule
- Trained project managers

## ❑ Targets

- 85% of projects by requirements phase.

## ❑ Initiatives

- Self assessment training or project managers

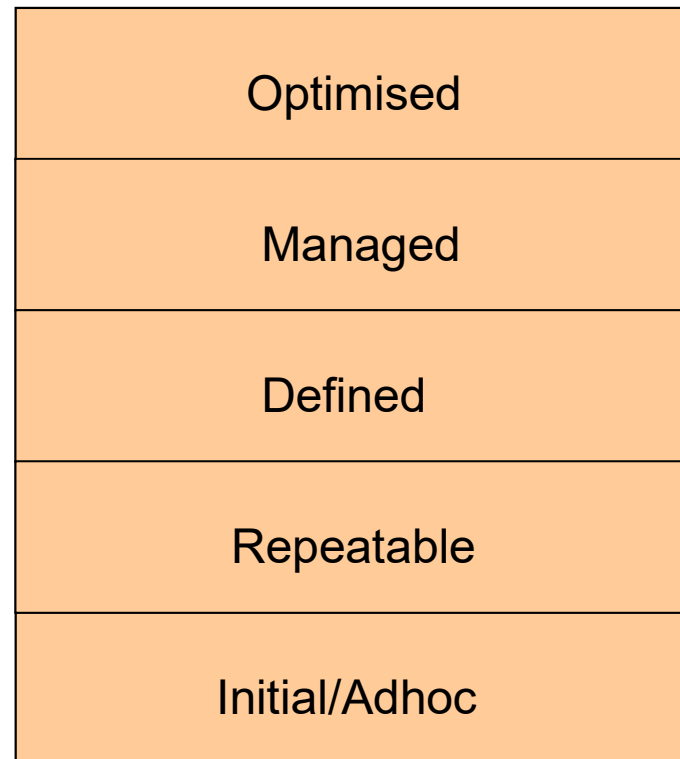

# Balanced Scorecards Projects

Target	Measure	Score
85% of new projects	Completed Self Assessments	$\frac{60\%}{85\%} \rightarrow 7$
85% of new projects	Completed Security Plans	$\frac{50\%}{85\%} \rightarrow 6$
Security plans on schedule	Milestones and deliverables	80% $\rightarrow 8$
100% of project managers trained in year	25% of project managers in training this quarter	$\frac{14\%}{25\%} \rightarrow 5$

**Result: 6.5 out of 10**

# Capability Maturity Model

# Accept Residual Risk

- ❑ Accept remaining risk
- ❑ Report to process owners, senior management

# Risk Acceptance

- ❑ Don't surprise management
- ❑ Residual risk acceptance
- ❑ Continual improvement
  - Monitor & review

# Constraints

- ❑ Skilled resources
  - Training and experience
- ❑ Funding
  - Budget and finance processes may be inadequate
- ❑ Internal competition for priority
  - My risk is bigger than yours
- ❑ Impact on operational staff
  - Additional human resources may be required
- ❑ Effort
  - RM effort must be balanced against other activities

# Time and Money

## ❑ Lead times for risk treatment

- The longer you wait, the more it costs
- Today's major risk could be irrelevant next year
- New and urgently critical risks can intervene
- The worst could happen *before* you're prepared

## ❑ Costs

- Design and development
- Implementation
- Management and maintenance
- Operational overheads
- Impact on system reliability or availability

# Control Cost/Benefit Analysis

- It usually comes down to \$\$

# Review & Discuss

- ❑ Risk Management Activities
- ❑ Applications of Risk Management
- ❑ Benefits of Risk Management
- ❑ Why Different Frameworks and Approaches?
- ❑ Special meanings of terms
- ❑ What is RISK?

# Shortcuts

- ❑ Combine threat and vulnerability assessments
- ❑ Include existing controls
  - Skip calculating the inherent risk
- ❑ Exclude common (non-critical) risks
  - Protected by baseline controls

# Critical Success Factors

- ❑ Stakeholder involvement
- ❑ Regular/appropriate communication with stakeholders
- ❑ Manage perceptions
  - perceptions drive decisions
- ❑ Balancing effort, risks and opportunity

# Critical Success Factors (2)

- ❑ Executive support
- ❑ Effective communication
  - based on the target audience
- ❑ Balancing precision/accuracy and timeframes

# Critical Success Factors

- ❖ Stakeholder involvement
- ❖ Regular/appropriate communication with stakeholders
- ❖ Manage perceptions
  - perceptions drive decisions
- ❖ Balancing effort, risks and opportunity

# Critical Success Factors (2)

- ❖ Executive support
- ❖ Effective communication
  - based on the target audience
- ❖ Balancing precision/accuracy and timeframes

# Decisions and Outcomes

# Persuasion

- ❑ Aristotle - three factors in persuasion:
  - intellectual (logos)
  - psychological (pathos)
  - social or ethical (ethos).
- ❑ People rarely change their minds merely on account of objective evidence.
  - People & decisions
    - personal relevance and impact of a claim,
    - Trustworthy source
- ❑ Alan Alda
  - Tell a story !

# Decision Making

- ❑ Risk Assessment goal = decisions
- ❑ Psychology of decision making and judgements
  - Kahneman and Tversky
  - Prof Richard Thaler
- ❑ Decision theory debate
  - Rational decision theory v's
  - Biased and heuristic decisions

# Heuristics

- ❑ “Rules of thumb”
- ❑ ‘industry good practice’
- ❑ ‘major change = major risk’
- ❑ . . . . .

# Cognitive Biases

- ❑ Deviations from rational judgement
- ❑ Availability bias
  - More frequent, recent information = higher weight
- ❑ Anchoring bias
  - Tendency to use the first piece of information
- ❑ Optimism bias
  - less at risk of experiencing a negative event compared to others
  - I'm a lucky person – always have been !!
- ❑ Confirmation bias
  - Due to preconceptions
- ❑ Conservatism or regressive bias
  - high values and high likelihoods overestimated
  - low values and low likelihoods are underestimated
- ❑ Conflict of Interest
  - Bonuses

# Workshop

A practice run!

# The End

Infosec Services &  
ICT Risk
